

GuideSignal Agent Instructions — Role Selection & Readability

1. Purpose

These instructions explain how to:

- Add a Job Seeker role option to the role selection form.
- Convert existing checkboxes into radio buttons so that only ONE role can be chosen.
- Ensure role selection is REQUIRED before signup.
- Improve readability of text site-wide in line with Mini1 design (dark text, larger subhead).

2. Update Auth Page (auth.html)

1. Locate the role selection section in auth.html.
2. Replace the existing checkboxes with radio buttons as shown below:

```
<div id="role-selection">
  <p>I am a...</p>
  <label>
    <input type="radio" name="role" value="student" required>
    Student — Looking for internships and entry-level opportunities
  </label><br>
  <label>
    <input type="radio" name="role" value="job_seeker" required>
    Job Seeker — Seeking new career opportunities
  </label><br>
  <label>
    <input type="radio" name="role" value="recruiter" required>
    Recruiter — Posting jobs and hiring talent
  </label>
</div>
```

3. Validation Script

Add JavaScript validation to ensure a role must be selected before submission:

```
<script>
document.querySelector("form").addEventListener("submit", function(e) {
  const role = document.querySelector("input[name='role']:checked");
  if (!role) {
    e.preventDefault();
    alert("Please select one role before continuing.");
  }
});
</script>
```

4. Readability Fixes (Mini1 Style)

- Replace all light gray (#aaa, #bbb) text with #333 (dark gray).
- Increase subhead font size from ~14px to 18px.
- Use font-weight: 500 (medium) for subheads.
- Ensure minimum body text size is 16px.
- Headline text should remain black (#000), large, and bold.

5. CSS Example (Apply Globally)

```
.hero-subtext {
  color: #333;
```
